yourIT/spamguard

The battle to stop spam is a continuing ever-changing fight. Implementing a reliable spam filter software is the best first protective step. Spam filter software will help users create a solid wall of defence that only allows wanted emails into their inbox.

### Benefits

- Our fully-managed filtering provides comprehensive email security, wiping out over 99.9% of spam, viruses, worms and harmful content before it reaches your network.
- Leveraging a unique and patented multi-layered system of more than 20 separate filters, core filtering protects against a wide range of email dangers.
- No more wasted time spent filtering unwanted emails.
- Protection against email that contains worms, viruses, trojans plus embedded key loggers and other malware.
- Strong spam filter software can identify HTML email that contains phishing attacks designed to harvest a user's sensitive personal information.

### Product Information

- Robust perimeter-based email security.
- Protective layer to your business communications.
- A bespoke tailored service with a simple user interface.

### Keyword Bingo

- **Perimeter security** - multi-layer filtering which protects against a wide range of email dangers.
- **Protective layer** - protecting existing hardware and software from external threats.
- **Bespoke tailored service** - a highly customisable product preconfigured to deliver instant results.
